

John Woods *(property manager)* managing his after-hours air conditioning portfolio

After-hours air conditioning just got a whole lot easier.

AURA's unique WEB and WAP interfaces simplify the way tenants and property professionals control and administer their after-hours air conditioning, *24 hours a day.*

Property Professionals

- Print invoices, export usage data or modify tenants details without ever having to visit the premises
- Interfaces with most BMS systems or can operate "stand-alone". Gives older buildings a technology upgrade!
- Option to operate normal hours air conditioning with the integrated time clock
- Schedule daylight savings changes and public holidays automatically!
- No need to *ever* update the software (that's our job and we do it as part of the package)
- Minimise disputes - All schedules are logged with date, username, activation time and duration.

Tenants

- *Easily* set schedules via the web - no more messing around with DTMF
- Set repeat schedules for those busy periods or late meetings
- Review schedules set by other staff members

Whether your portfolio is one building or one hundred, AURA makes the activation and administration of after-hours air conditioning simple and convenient.
