

AURA was responsible for the design and implementation of the Afterhours on line Air Conditioning scheduling system for Melbourne Central Tower in 2013.

This included the development of specific Air Conditioning scheduling software system for the Tower including its system operations, tenant access and ID systems.

The AURA team were also responsible for the running of the computer network and communications infrastructure, as well as the provision of an IT Helpdesk for all Melbourne Central Tower users and building management.

This included performing key support roles specifically for MCT building management Operations division.

We can honestly say that the depth of knowledge, service, support and professionalism displayed was second-to-none. The AURA team understood what working to tight deadlines, under pressure was all about.

We would recommend the AURA system to any organisation that needed integrity, commitment, depth of knowledge and experience with an Air Conditioning building scheduling online system.
